Introduction

Background

Introduction of Goods and Services Tax (GST) across India with effect from 1st of July 2017 is a very significant step in the field of indirect tax reforms in India. For quick and easy movement of goods across India without any hindrance, all the check posts across the country are abolished. The GST system provides a provision of e-Way Bill, a document to be carried by the person in charge of conveyance, generated electronically from the common portal. To implement the e-Way Bill system, ICT based solution is required. Hence, as approved by the Goods and Services Tax (GST) Council, a web based has been designed and developed by National Informatics Centre and it is being rolled out for the use of taxpayers and transporters. Also, the other modes of e-way bill generation rolled out are SMS based, Android based and API based solutions.

Purpose and Intended Audience

This document aims to explain the operational and technical procedure on how to use API interface to generate the e-Way Bills by the Tax payers or Transporters.
This document is intended for technical experts or software solutions providers of tax payers or transporters, who are already using a computerized system for generating invoices and also generating a large number of invoices. The best method of EWB generation for such large tax payers, who generate the large number of e-Way Bills, is to build API interface with the E-way bill system. This is site-to-site integration of the systems for e-way Bill generation. In this method, through GSP providers the tax payer system will request e-way bill to the E-way Bill system while generating invoice and get the e-Way Bill number. This can be printed on the Invoice document and movement of the goods can be started. This avoids duplicate data entry and eliminates data entry mistakes. To use this facility, the tax payers have to request the online for this service.

Scope

This document covers APIs published by E-way bill system. It includes API description with detailed payloads to be exchanged. The details of various APIs for of Authentication, E-way bill generation, Consolidated E-way bill generation, Vehicle No. updation, Cancellation of e-way bill, Rejection of e-way bill are explained in detail for better understanding for the tax payers and transporters.

Adaequare GSP Services

With the success as a reliable "Application Service Provider" for all GST Services such as Return filing, Tax determination & Invoicing, **Adaequare & Udyog Software** has rollouted out GSP Services.

Adaequare GSP offers an Advanced API gateway to provide best in class GSP services to ASPs, ISVs, OEMs and enterprises. We provide different API services: Standard APIs and Custom APIs. Our GSP customers are free to choose the API services as per their requirements. We have developed enriched APIs which can potentially eliminate the technical limitations of standard APIs. Enriched APIs have been enhanced for Performance, Reliability & Availability.

Adaequare GSP has an intuitive user interface & simple onboarding process. Customers can create Users, Roles & Permissions and access the API logs and metering details. Adaequare API Gateway comes with other prominent features such as Fault Tolerance, GSTN failure handling and Call-backs.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

Adaequare GSP - Salient features

1. Simple onboarding and Integration Process.
2. Developer friendly API documentation
3. Seamless & Secured relay of data from Source systems to GSTN
4. Intuitive User Interface & Dashboards for checking the API call metrics and log details
5. Retry logic for failed GSTN Data Post API Calls
6. Reliable & Responsive support services
7. Automated ticketing service to keep customers informed of GSTN API updates
8. Sandbox to ASPs to perform API Testing

We offer different API services under Adaequare GSP that include standard APIs provided by GSTN & NIC and enriched GSP API services.

- GST Return Filing APIs
- E-Waybill APIs
- GST Public APIs
- Enriched APIs
- Connectors to different ERPs like SAP, Tally etc.
- Build your Own ASP APIs

The enriched APIs offer several advantages over the standard APIs such as less integration time, manging encryption & decryption and session management.

In this document we will describe about the usage of enriched E-Waybill APIs.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

1. Adaequare GSP

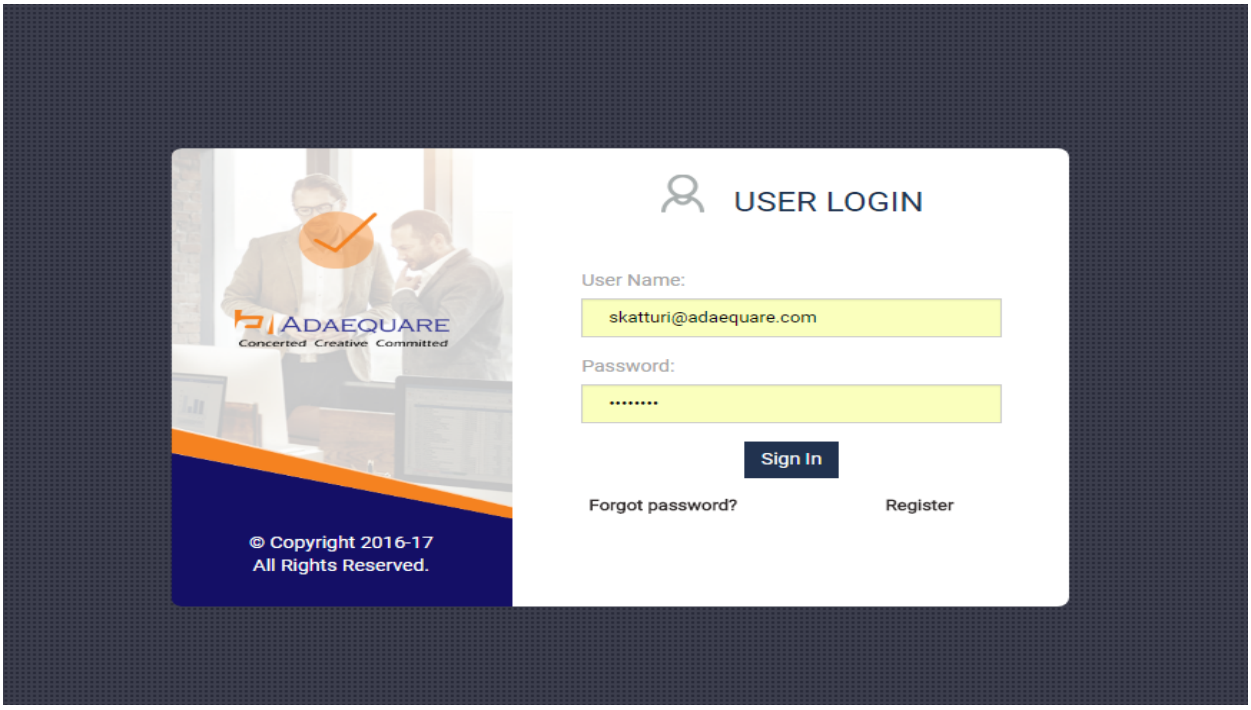

<base_url>	https://gsp.adaequare.com

Note: Read <base_url> as mentioned above at places in the document.

ASP Registration:
URL for Adaequare GSP E-Way System: <base_url>/ewb

Follow the below steps to register yourself as an ASP to start using the Adaequare GSP services.
Step 1:
Go to the Adaequare GSP login page <base_url>/index.html and click on 'Register' to register your ASP by providing valid Address, Email and Mobile number.

Step 2:
ASP will receive a verification mail to activate the account. After account activation ASP can access GSP dashboard for Profile setting, Change password, User management, Metering, App management etc.

Step 3:
After successful login ASP need to create an App.

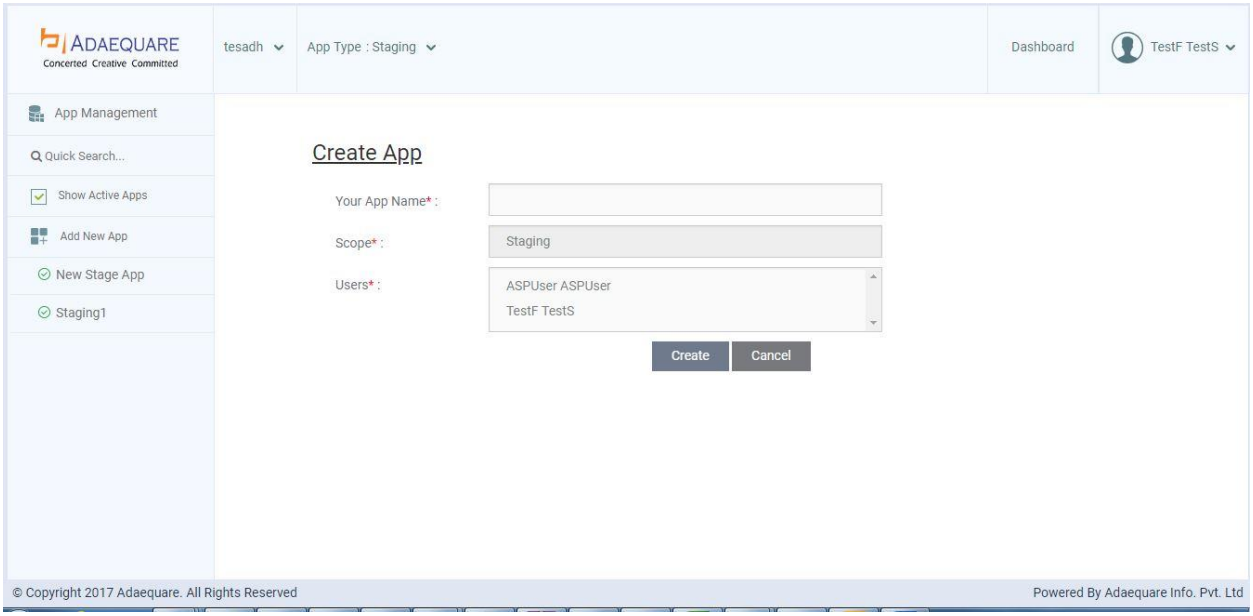

An 'App' is useful to create unique credentials for the ASP to authenticate with the Adaequare GSP. Select an environment (Staging/Live) by selecting the App Type. Click on “Add New App” button.

Enter the required details like App Name and select the users and click on Create button.

After successful creation of app, the user will receive an email with the following details:

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

Client Id	7F72AEA8EB5A49E997BD5CFD9509XXXX
Client Secret	732F3DAAG8146G499DGBDA0G9145BD11XXXX

Adaequare GSP Authentication

In order to Authenticate to Adaequare GSP, use the Client ID and Secret which was sent to the registered email to get the Adaequare GSP Access Token.
Make use of the below service to generate the Adaequare GSP Access token using the above credentials:

URL: <base_url>/gsp/authenticate?grant_type=token

HEADERS:
gspappid:7F72AEA8EB5A49E997BD5CFD9509XXXX
gspappsecret:732F3DAAG8146G499DGBDA0G9145BD11XXXX

RESPONSE:
{ "access_token":
"eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJzY29wZSI6WyJnc3AiXSwiZXhwIjoxNTIxMjczMTAzLCJhdXRob3JpdGllcyI6WyJST0xFX0FTUF9TQl9BUFAiXSwianRpIjoiMmY2MmIwMmEtMWYzNi00Y2EzLWFkNjMtOGM1MTFiYzBlOGMyIiwiY2xpZW50X2lkIjoiNjRBQjc4OTRENjE2NDRGM0I1Q0ExOEI0NzM4QzcwMEQifQ.jsOIll7eBIWLr2dte60hEIWuRoblcYcIobdPbMiMkQ0",
"token_type": "bearer",
"expires_in": 86399,
"scope": "gsp",
"jti": "2f62b02a-1f36-4ca3-ad63-8c511bc0e8c2" }

Note:
The access token generated will be valid for 24 hours from the time of generation. If the token expires, create a new one by following the same process.
This is an API call to get Adaequare GSP access token and will not be considered for billing.
While using Adaequare GSP Enriched APIs, ASPs are not required to call the Eway Bill Authenticate

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

API call. We will take care of generating Eway bill auth token and verifying the validity of the auth token. The Eway Bill Access token is configured to expire after 6 hours. On expiry, same authentication API needs to be invoked to get new Access Token issued.

API URL Format For Sandbox and Production

Sandbox & Live URL Format:
The URLS mentioned in the subsequent pages are sandbox URLs.

Below is the Sanbox URL format of Sanbox APIs. For example, Generate Eway bill API URL:
<base_url>/test/enriched/ewb/ewayapi?action=GENEWAYBILL

The Live API URL Format is similar to Sandbox API URL. Once "/test" is removed from Sandox URL, it becomes the Live URL.

The Live URL for Generate Eway bill API:
<base_url>/enriched/ewb/ewayapi?action=GENEWAYBILL

Similarly, in case of other APIs as well the Live API URLs can be obtained from Sandbox API URLs by removing "/test" from Sanbox API URL.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

2. API Overview

The EWAYBILL APIs are used to communicate between Tax Payers or Transporters Systems with E-way bill System. This section describes standards and formats which will be used to define API exposed by E-WAY BILL systems. E-WAY BILL APIs will be implemented as RESTFUL Web services.

Below table depicts the URI pattern to be used while defining API end points:

API Format:
E-WAY BILL APIs will be published as REST web service over HTTPS.

API URI	<base_url>/ewb/	
HTTP Method	GET	To fetch data from Adaequare E-WAY BILL System
	POST	To submit data to Adaequare E-WAY BILL System

List of API Methods:

Sl No.	API Service	API Description
1.	Authenticate	Authentication with API system with the credential provided to access all other APIs
2.	Generate E-Way Bill	Generate e-Way Bill
3.	Update Part-B/ Vehicle Number for E-Way Bill	Update new vehicle number (part-B) for the e-way Bill, whenever, the transportation changes
4.	Generate Consolidate E-Way Bill	Generate Consolidated e-Way Bill
5.	Cancel E-Way Bill	Cancel the e-Way Bill, if wrongly generated or purchase order is cancelled.
6.	Reject E-Way Bill	Reject the e-Way Bill, generated by others on your GSTIN, if it does not belong to you.
7.	Get e-Way Bill	Get the e-way bill details based on EWB Number, if the requestor is supplier or recipient or transporter
8.	Get e-way bills assigned for transportation – for a day	Get the list of e-way bills assigned to you (requesting GSTIN) as transporter for transportation for particular generated date in your state. This can be used for Updating Part-B by you as transporter.
9.	Get e-way bills assigned for transportation – by GSTIN	Get the list of e-way bills assigned to you (requesting GSTIN) for transportation by particular tax payer (GSTIN) and generated date. This can be used for Updating Part-B by you as transporter.
10.	Get e-way bills generated by other party	Get the list of e-way bills generated by other parties on your name (requesting GSTIN) based on generated date. This can be used by you for rejecting., if e-way bills do not belong to you.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

11.	Get Consolidated E-Way Bills	Get the Consolidated e-Way Bill details based on consolidated EWB Number, generated by you.
12.	Get Eway Bills for Transporter By State	Provides the list of E-way bills assigned to requesting GSTIN/TRANSIN for transportation based on generated date and state code of the generator of the E-waybill.
13.	Update transporter	Update or assign the e-way bill to another transporter so that he can update further Part-B as per movement of goods
14.	Re-generate Cons. E-way bill	Re-generate the Consolidated e-way bill whenever the transportation details like vehicle number changes (due to break down of vehicle, etc) for all the involved e-way bill in original Cons. EWB.
15.	Extend Validity	Extend the validity of the e-way bill with proper reason, if the validity is expiring before reaching the destination
16.	Get tax payer	Get the tax payer details for given GSTIN
17.	Get Enrolled Transporter	Get the enrolled transporter details for given TRANSIN
18.	Get HSN	Get the HSN description for the given HSN code
19.	Get Error list	Get all the error codes passed by the APIs
20.	Initiate Multi Vehicle Movement	Initiate Multi Vehicle Movement
21.	Add Vehicles details for Multi Vehicle Movement	Add vehicle details to Multi Vehicle Movement
22.	Change Vehicles details for Multi Vehicle Movement	Change Vehicles details for Multi Vehicle Movement
23.	Get Eway Bills By Date	This API provides the e-way bill details for a generated date by the logged in user
24.	Get Eway Bills Rejected By Others	This API provides the list e-way bills generated by the logged in user and rejected by other parties for a given date of generation.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

E Way Bill API Version 1.0.3

1. If consigner has generated E Way Bill using a document number, and if consignor, consignee or transporter tries to generate using the same document number, it will not generate. But if consignee or transporter has generated the E Way Bill with a document number, consignee or transporter can generate multiple E Way Bill using same document number as long as consigner does not generate E Way Bill using the same document number, the response will have an alert message indicates the same.
2. **`CessNonAdvolValue`** is added to the main JSON and **`cessAdvol`** is changed to **`cessNonAdvol`** in **`itemList`**
3. Passing transporterId is mandatory for generating Part A Slip and **`transDocNo`**, **`transMode`** and **`vehicleNo`** should be blank.
4. **`GetEwayBill`** API response is as shown in the document
5. Cess Rates are updated in Annexure A9

Changes in Version 1.03

1. Tax rates are being validated. Only the allowed tax rates will be accepted as per *Annexure A9*.
2. Validations of PIN codes with respect to the States. This has already been implemented in previous release.
3. Document type is validated against the supply and sub supply type. Accordingly, the type of Consigner and Consignee is allowed. Please refer to the Annexure B2 for the mapping of the supply, sub-supply and document types.
4. The system checks for the duplicate e-way bill on the same document number of the consignor. If already one e-way bill exists with same document number, the system will not allow generating one more e-way bill on the same number. That is, if the consignor is trying to generate multiple e-way bills based on one document number, the system throws error. Even if the consignee or transporter tries to generate an E Way Bill for the same document number, system will not allow generation of E Way Bill as consigner himself has used the document number for generation of E Way Bill.

   However, if consignee or transporter tries to generate the multiple e-way bills on the same document number of the consignor, provided the consigner has not used the document number already to generate E Way Bill, the system will generate E Way Bill and alert through API to the consignee or transporter that already there is one e-way bill with that document number.
5. To identify the type of movement of goods, type of transaction is being captured. The types of the transaction are 'Regular', 'Bill From-Dispatch From', 'Bill To Ship To', and combination of both. If the transaction involves Dispatch-From and / or Ship-To parties, then their GSTINs and Trade names have to be provided (**`shipToGSTIN`**, **`shipToTradeName`** and **`dispatchFromGSTIN`**, **`dispatchFromTradeName`**). These are optional parameters. The additional parameters are added for request JSON, used to generate the E Way Bill, may be referred in the following sections for details
6. Additional fields for **`cessNonAdvolValue`** and **`otherValue`** have been introduced to enter CESS Non Advol amount and any other charges (+/-) written in invoice.
7. Sum of **`totalValue`**, **`cgstValue`**, **`sgstValue`**, **`igstValue`**, **`cessValue`**, **`otherValue`** and **`cessNonAdvolValue`** should be equal to or less than **`totInvValue`** with a grace value of Rs. 2.00.
8. Passing transporterId is mandatory for generating Part A Slip and **`transDocNo`**, **`transMode`** and **`vehicleNo`** should be blank.
9. Get E Way Bill Response will have additional parameter **`transactionType`** indicating the Transaction type**`, cessNonAdvolValue, otherValue.`** The item list will have the parameter **`cessNonAdvol.`**
10. GSTR1 related data parameters are being made mandatory while generating the e-way bill. Please refer to the following sections

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

11. Alerting the generator of the E-Way Bill through SMS message, in case the total invoice value is more than Rs. 10 Crores.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

3. Generate E-Way Bill

The format and details of a Generate E-way bill API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=GENEWAYBILL
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
username	Username generated by the Requester from E-Way Bill portal
password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Tax payer or Transporter)
requestid	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload for Generate EWAY Bill:

```
{
"supplyType":"O",
"subSupplyType":"1",
"subSupplyDesc":"",
"docType":"INV",
"docNo":"Brk001",
"docDate":"15/12/2017",
"fromGstin":"05AAACG2115R1ZN",
"fromTrdName":"welton",
"fromAddr1":"2ND CROSS NO 59  19  A",
"fromAddr2":"GROUND FLOOR OSBORNE ROAD",
"fromPlace":"FRAZER TOWN",
"fromPincode":560042,
"actFromStateCode":29,
"fromStateCode":29,
"toGstin":"02EHFPS5910D2Z0",
"toTrdName":"sthuthya",
"toAddr1":"Shree Nilaya",
"toAddr2":"Dasarahosahalli",
"toPlace":"Beml Nagar",
"toPincode":560066,
"actToStateCode":29,
"toStateCode":28,
"transactionType":4,
"dispatchFromGSTIN":"29AAAAA1303P1ZV",
"dispatchFromTradeName":"ABC Traders",
"shipToGSTIN":"29ALSPR1722R1Z3",
```

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

```
"shipToTradeName":"XYZ Traders",
"otherValue": 0,
"totalValue":56099,
"cgstValue":0,
"sgstValue":0,
"igstValue":300.67,
"cessValue":400.56,
"cessNonAdvolValue":400,
"totInvValue":57200.23,
"transporterId":"",
"transporterName":"",
"transDocNo":"",
"transMode":"1",
"transDistance":"656",
"transDocDate":"",
"vehicleNo":"PVC1234",
"vehicleType":"R",
"itemList":
[{
"productName":"Wheat",
"productDesc":"Wheat",
"hsnCode":1001,
"quantity":4,
"qtyUnit":"BOX",
"cgstRate":0,
"sgstRate":0,
"igstRate":3,
"cessRate":0,
"cessNonAdvol":0,
"taxableAmount":56099
}]
}
```

Response Payload

Attributes	Description	Value
status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Genarate Eway bill request	
Message	Response Message	

The Sample Result of the GENEWAYBILL would be as follows:

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

```
{
   "success": true,
   "result": {
      "ewayBillDate": "17/10/2018 11:21:00 AM",
      "ewayBillNo": 361001541142,
      "alert": "",
      "validUpto": "24/10/2018 11:59:00 PM"
   },
   "message": "E-Way Bill is generated successfully"
}
```

Validations:

1. In case of tax payer generating as supplier, the GSTIN of the requesting tax payer should be `fromGstin`
2. In case of tax payer generating as recipient, the GSTIN of the requesting tax payer should be `toGstin`
3. In case of transporter (enrolled transporter / GSTIN updated as transporter in e-way bill portal) generating e-way bill, the GSTIN/TRANSIN of the requesting person should be `transporterId`
4. Enrolled transporter(TRANSIN) cannot be supplier (`fromGstin`) or buyer (`toGstin`)
5. The following fields should have the one of the values given in the master codes
    a. Supply Type
    b. Sub Supply Type
    c. Document Type
    d. Transportation Mode
    e. Unit Quantity Code
6. The Document Date should be less than or equal to current date
7. The Transport document Date should be greater than equal to document date
8. `fromGstin` and `toGstin` should be valid GSTIN number of the supplier and recipient. In case of unregistered person involved in the transaction, pass URP in these fields.
9. In case of 'Bill to – ship to' transaction, `toGstin`, `toTrdName` and `toStateCode` should be passed with 'Bill To' party and - `toAddr1`, `toAddr2`, `toPlace`, `toPincode` and `actToStateCode` values should be passed with 'Ship To' party.
10. In case of 'Bill From – Dispatch From' transaction, `fromGstin`, `fromTrdName` and `fromStateCode` should be passed with 'Bill From' party and `fromAddr1`, `fromAddr2`, `fromPlace`, `fromPincode` and `actFromStateCode` values should be passed with 'Dispatch from' party.
11. HSN Code should be valid as per the GST master
12. In case of intra-state transaction, where both `fromGstin` and `toGstin` belong to same state, the SGST and CGST tax rate and value has to be passed
13. In case of inter-state transaction, where both `fromGstin` and `toGstin` belong to different states, the IGST tax rate and value has to be passed
14. In case of one of the party is SEZ unit, then IGST tax rate and value has to be passed
15. In case of road is a transportation mode , the vehicle number should be passed and transport document number is optional
16. In case of rail, air or ship is a transportation mode, the transport document number is must
17. In case of export, the state and pin of shipping address has to be 'Other Country' and 999999.
18. In case of import, the state and pin of shipping address has to be 'Other Country' and 999999.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

19. If PART-B (transportation mode, vehicle number or transport document number) is not passed, the system generate unique number and return without validity period
20. If the transportation is done through the transporter, `transporterId` field should have valid TRANSID or GSTIN
21. In case of road transportation, if the vehicle is 'over dimension cargo', pass O, otherwise R (regular).
22. In case of non-advelarom tax of cess, directly pass the calculated value in `cessValue` along with advelarom cess tax value, if any.
23. If vehicle number is passed, the format of the vehicle should be valid and as per the format
24. In case of sub supply type is others, and then pass the `subSupplyDesc` accordingly.
25. In case of import or export, the actual distance being travelled in the country has to be passed.
26. The actual distance from source to destination cannot be greater than 4000.

Additional Validations

The following are the additional Validations added as part of version 1.0.3 changes

1. Parameter **`TransactionType`** should be either 1,2,3 or 4 for the transaction types

   1- Regular
   2- Bill To - Ship To
   3- Bill From - Dispatch From
   4- Combination of 2 and 3

   For type 1 shipToGSTIN and dispatchFromGSTIN should be blank, For type 2, **`shipToGSTIN`**, **`shipToTradeName`** may be passed, for type 3, **`dispatchFromGSTIN`**, **`dispatchFromTradeName`** may be passed and for type 4, both may be passed.

Scenario	Value	Description
Regular	1	Goods are sent from Seller's Location to Recipient Location. Here Recipient location is both billing and also shipping location. So "fromGstin" is Seller Location and "toGstin" is Recipient Location. "shipToGSTIN" and "dispatchFromGSTIN" should be blank.
Bill To - Ship To	2	Goods are sent from Seller Location to Recipient Location. Here both billing and shipping location of Recipient are different. Goods are billed at one location and shipped to another location. So "shipToGSTIN" would be GSTIN of the location where goods are shipped. "toGstin" should be Recipient's billing location's GSTIN.
Bill From - Dispatch From	3	Goods are dispatched from a different location and billed from seller's location. So, "fromGstin" is Seller Location. "dispatchFromGSTIN" is GSTIN of the location from which goods are dispatched.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

		Here Recipient billing and shipping location are same and "toGstin" is Recipient Location.
Combination of 2 and 3	4	Goods are dispatched from a different location and billed from seller's location. So, "fromGstin" is Seller Location. "dispatchFromGSTIN" is GSTIN of the location from which goods are dispatched. Goods are billed to one location (i.e., Recipient's Location) and shipped to another location. So "shipToGSTIN" would be GSTIN of the location to where goods are shipped. "toGstin" should be Recipient's billing location's GSTIN.

2. The tax rates and Cess (**cgstRate, sgstRate, igstRate, cessRate, cessNonAdvol)** should be the valid Tax Rates as per the Annexure A or as per the notifications issued by GSTN time to time

3. GSTR1 fields (**cgstValue, sgstValue, igstValue, cessValue, totalValue, otherValue and totInvValue** in main object and **cgstRate, sgstRate, igstRate, cessRate, cessNonAdvol, taxableAmount**) are mandatory as per the intrastate or interstate transaction.

4. The combination of **supplyType, subSupplyType, docType, fromGstin, toGstin** are validated as per the Annexure B

5. PIN Codes are validated against the State they belong to **actFromStateCode- fromPincode** and **actToStateCode- toPincode**

6. If Consignor generates E Way Bill, System will check whether there is any active E Way Bill for the given document number, if exists, will throw error. If Consignee or Transporter generates the E Way Bill, system will check if there is any E Way Bill with the given document number, if exists, a E way Bill will be generated and the response will have a warning message in a new parameter 'alert' provided the consigner has not generated E Way Bill using the same document number.

7. Additional fields for **cessNonAdvolValue** and **otherValue** have been introduced to enter CESS Non Advol amount and any other charges (+/-) written in invoice.

8. Sum of **totalValue, cgstValue, sgstValue, igstValue, cessValue, otherValue** and **cessNonAdvolValue** should be equal to or less than **totInvValue**. A grace value of Rs. 2.00 is allowed

9. Passing **transporterId** is mandatory for generating Part A Slip and **transDocNo, transMode** and **vehicleNo** should be blank.

4. Update Part-B/Vehicle Number – API

The format and details of a Vehicle No. Updation API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=VEHEWB
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
username	Username generated by the Requester from E-Way Bill portal
password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Tax payer or Transporter)
requestid	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload for Vehicle No. Updation:

```
{
  "EwbNo": 331001073381,
  "VehicleNo": "PQR9876",
  "FromPlace": "BANGALORE",
  "FromState": 29,
 "ReasonCode": "1",
  "ReasonRem": "vehicle broke down",
  "TransDocNo ": "1234 ",
  "TransDocDate ": "12/10/2017 ",
   "TransMode": "1"
}
```

Response Payload

Attributes	Description	Value
status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Vehicle No. Updation request	

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

Message	Response Message	

The Sample Result of the Vehicle No. Updation would be as follows:

```
{
   "success": true,
   "result": {
      "validUpto": "08/06/2018 11:59:00 PM",
      "vehUpdDate": "07/06/2018 05:14:00 PM"
   },
   "message": "E-Way Bill is updated successfully"
}
```

Validations:

1. Part-B can be updated by the generator of the e-way bill, if there is no transporter, or by the assigned transporter
2. Part-B can be updated only if the e-way bill is active, that is, not cancelled
3. Part-B can be updated only if the e-way bill is within validity period, that is, validity is not expired if validity is already set
4. If only Part A is available, Validity will be set
5. If vehicle is passed, the format of the vehicle number should be valid and as per the format
6. In case of road as a transportation mode , the vehicle number should be passed and transport document number is optional
7. In case of rail, air or ship as a transportation mode, the transport document number is must
8. If validity has been calculated already for the E Way Bill, then vehicle type value will be ignored.
9. If validity has not been calculated and vehicle type value has not been passed, the system will take the vehicle type 'R' as default and process the request

5. Generate Consolidated E-Way Bill

The format and details of Consolidated E-way bill API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=GENCEWB
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Tax payer or Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload for Consolidated E-way bill:

```
{
  "fromPlace": "BANGALORE SOUTH",
  "fromState": "29",
  "vehicleNo": "PQR9876",
  "transMode": "1",
  "TransDocNo":null,
  "TransDocDate":null,
  "tripSheetEwbBills": [
    {       "ewbNo": 331001073381    },
    {       "ewbNo": 301001073436    }
]}
```

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Consolidated E-way bill request	

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

Message	Response Message	

The Sample Result of the Consolidated E-way bill would be as follows:

```
{
   "success": true,
   "result": {
      "cEwbDate": "07/06/2018 05:18:00 PM",
      "cEwbNo": "3510008517"
   },
   "message": "Consolidated E-Way Bill is generated successfully"
}
```

Validations:

1. EWB can be added to the CEWB if the generator of CEWB is a generator or the assigned transporter of the e-way bill.
2. EWB can be added to the CEWB only if the e-way bill is active, that is, not cancelled
3. EWB can be added to the CEWB only if the e-way bill is within validity period, that is validity is not expired.
4. If vehicle number is passed, the format of the vehicle number should be valid and as per the format
5. In case of road as a transportation mode, the vehicle number should be passed and transport document number is optional
6. In case of rail, air or ship as a transportation mode, the transport document number is must

6. Cancel E-Way Bill

The format and details of Cancellation of E-way bill API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=CANEWB
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester(Tax payer or Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload for Cancellation of E-way bill:

```
{
"ewbNo": 331001073381,
 "cancelRsnCode": 2,
"cancelRmrk": "Cancelled the order"
}
```

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Cancellation of E-way request	
Message	Response Message	

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

The Sample Result of the Cancellation of E-way bill would be as follows:

```
{
   "success": true,
   "result": {
      "cancelDate": "07/06/2018 05:19:00 PM",
      "ewayBillNo": "351001346416"
   },
   "message": "E-Way Bill is cancelled successfully"
}
```

Validations:

1. E-way bill can be cancelled by the generator of the e-way bill only.
2. E-way bill can be cancelled within 24 hours of generation of e-way bill

7. Reject E-Way Bill

The format and details of Reject E-way bill API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=REJEWB
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Tax payer or Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload for Reject E-way bill:

```
{
  "ewbNo": "371000978328"
}
```

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Reject E-way bill request	
Message	Response Message	

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

The Sample Result of the Reject E-way bill would be as follows:

```
{
   "success": true,
   "result": {
      "ewbRejectedDate": "07/06/2018 05:20:00 PM",
      "ewayBillNo": "361001346419"
   },
   "message": "E-Way Bill is rejected successfully"
}
```

Validations:

1. E-way bill can be rejected by the other party involved in the e-waybill, if generated by the supplier/recipient.
2. E-way bill can be rejected by supplier or recipient, if it is generated by the transporter.
3. E-way bill can be rejected within 72 hours of generation of e-way bill

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

8. Extend Validity of E-Way bill

The format and details of Extend Validity of E-way bill API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=EXTENDVALIDITY
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Tax payer or Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload for Extend Validity:

```
{
"ewbNo": 371001765493,
"vehicleNo": "HR04EL1234",
"fromPlace":"Bengaluru",
"fromStateCode":6,
"fromState":6,
"frompincode": 133001,
"remainingDistance":2000,
"consignmentStatus":"M",
"transitType":"",
"transDocNo": "1234 ",
"transDocDate": "26/04/2019",
"transMode": "1",
"extnRsnCode":1,
"extnRemarks":"Flood",
"addressLine1":"Bengaluru",
"addressLine2":"Bengaluru",
"addressLine3":"bn"
}
```

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Extend Validity of E-way bill request	
Message	Response Message	

The Sample Result of the Extend Validity of E-way bill would be as follows:

```
{
   "success": true,
   "result": {
      "ewayBillNo": "351001779485",
      "updatedDate": "09/05/2019 09:55:00 AM",
      "validUpto": "10/05/2019 11:59:00 PM"
   },
   "message": "E-Way Bill validity is extened successfully"
}
```

Validations:

1. The Validity of EWB can be extended only by the current transporter. If transporter is not assigned, then the generator can update.
2. The validity of EWB can be extended between 8 hours before expiry time and 8 hours after expiry time.
3. The reason code along with reason description for the extension has to be entered.
4. The present location of the consignment, at the time of requesting for the extension, has to be entered and distance to travel from there to destination has to be entered.
5. If vehicle number is passed, the format of the vehicle number should be valid and as per the format
6. In case of road as a transportation mode, the vehicle number should be passed, and transport document number is optional
7. In case of rail, air or ship as a transportation mode, the transport document number is must
8. Remaining distance should not be more than the actual distance mentioned during the generation of E-way bill.
9. To distinguish between the goods either on Road or in transit, new parameter transitType (R-Road, W - Warehouse, O-Others) are introduced for Extend E-waybill API.
10. If transmode is 1 to 4 then consignmentStatus value should be M and transitType should be blank ("transitType":"").
11. If transmode is 5 then consignmentStatus value should be T and transitType value can be either R or W or O.

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

The API information is subject to changes as per NIC eWay bill API updates.

9. Re-generate Consolidated E-way bill

The format and details of Re-generate Consolidated E-way bill API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=REGENTRIPSHEET
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Tax payer or Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload to Re-generate Consolidated E-way bill:

```
{
"tripSheetNo": 3710007099,
"vehicleNo": "PQR1234",
"FromPlace":"Bengaluru",
"fromStateCode":29,
  "FromState":29,
"transDocNo": "1234 ",
"transDocDate": "26/04/2018 ",

    "ReasonCode":"1",
      "TransMode":"1",
        "ReasonRem":"Flood"

}
```

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Re-generate Consolidated E-way bill" request	

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

Message	Response Message	

The Sample Result of the Extend Validity of E-way bill would be as follows:

```
{
   "success": true,
   "result": {
      "tripSheetEwayBills": [
         {
            "ewbNo": 331001346410
         },
         {
            "ewbNo": 301001346411
         }
      ],
      "tripSheetNo": 3210008518
   },
   "message": "Consolidated E-Way bill is regenerated successfully"
}
```

Validations:

1. CEWB can be re-generated by the generator of that CEWB or the current transporter.
2. Re-generate CEWB considers only the e-way bills which are active, that is, not cancelled
3. Re-generate CEWB considers only the e-way bills which are within the validity period, that is validity is not expired.
4. If vehicle number is passed, the format of the vehicle number should be valid and as per the format
5. In case of road as a transportation mode, the vehicle number should be passed and transport document number is optional
6. In case of rail, air or ship as a transportation mode, the transport document number is must

10. Update transporter

The format and details of Update transporter API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi?action=UPDATETRANSPORTER
Content-Type	application/json
Method	POST

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Tax payer or Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

The sample Request Payload to Update transporter:

```
{
"ewbNo":"351001073457",
"transporterId":"29AKLPM8755F1Z2"
}
```

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Update transporter request	
Message	Response Message	

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

The Sample Result of the Update transporter API would be as follows:

```
{
   "success": true,
   "result": {
      "transporterId": "29AKLPM8755F1Z2",
      "transUpdateDate": "07/06/2018 05:22:00 PM",
      "ewayBillNo": "331001346423"
   },
   "message": "Transporter details are updated successfully"
}
```

Validations:

1. The transporter can be updated for the e-way bill only by the current transporter. If transporter is not assigned, then the generator can update
2. Transporter ID should be valid GSTIN or TRANSIN
3. Transporter can be updated only if the e-way bill is active, that is, not cancelled
4. Transporter can be updated only if the e-way bill is within validity period, that is, validity is not expired.

15. Get Eway Bills For Transporter By State

This method provides the list of E-way bills assigned to requesting GSTIN/TRANSIN for transportation based on generated date and state code of the generator of the E-waybill.

The format and details of GetEwayBillsForTransporterByState API request is depicted in following table.

URL	<base_url>/test/enriched/ewb/ewayapi/GetEwayBillsForTransporterByState?date=13/03/2019&stateCode=05
Content-Type	application/json
Method	GET
URL Parameters	date, stateCode
URL Parameter Desc	date – E-way bill generated Date , stateCode – state code of the generator of the E-waybill - Parameters needs to be passed in the order in which it is listed.

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester (Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response of E-way bill assigned to a Transporter for a specific GSTIN Json string.	
Message	Response Message	

ADAEQUARE CONFIDENTIAL. All rights reserved.
The API information is subject to changes as per NIC eWay bill API updates.

      }
    ],
    "message": "E-Way Bill for trasporter by state is fetched successfully"
}
```

Validations:

1. Valid EWB generated date has to be passed.
2. Only active E-waybill will be considered in this API.
3. Valid state code of the EWB generator has to be passed.
4. Rate control limit has been set for accessing this API. This API can be accessed 50 times with in a span of 15 min. This 15 min window starts from the time of first access of this API, if API is accessed 50 times within this period, API will be blocked for the remaining duration of time period.
   For example: If you have accessed this API at 2:00 PM and tried 50 access till 2:05 PM then, you will be blocked till 2:15 PM for accessing this API as the allowed number of requests has been exceeded, you will get an error code 658. Again you are allowed to access this API only after 2.15 PM and the same above process will continue there after.

23. Get Eway Bills By Date

This method provides the e-way bill details for a generated date by the logged in user.

The format and details of **Get Eway Bills By Date API** request is depicted in following table:

URL	<base_url>/test/enriched/ewb/ewayapi/GetEwayBillsByDate
Content-Type	application/json
Method	GET
URL Parameters	date

Request Header

Attributes	Description
Username	Username generated by the Requester from E-Way Bill portal
Password	Password generated by the Requester from E-Way Bill portal
GSTIN	GSTIN of Requester(Tax payer or Transporter)
Requested	UniqueId to identify the Request
Authorization	Bearer token to authorize to the Adaequare E-Way Bill System

Response Payload

Attributes	Description	Value
Status	Status of request	0 – for Failure ;1 – for Success
Result	Response from Eway Bill for Get Eway Bills By Date API request	
Message	Response Message	

The Sample Result of the Get Eway Bills By Date API would be as follows:

```
{
"success": true,
"result": [
{
"ewbNo": 341001753879,
"ewbDate": "02/04/2019 05:53:00 PM",
